

Assignment No. 10

Aim : Data Visualization III

Download the Iris flower dataset or any other dataset into a DataFrame. (e.g., <https://archive.ics.uci.edu/ml/datasets/Iris> (<https://archive.ics.uci.edu/ml/datasets/Iris>)). Scan the dataset and give the inference as:

1. List down the features and their types (e.g., numeric, nominal) available in the dataset.
2. Create a histogram for each feature in the dataset to illustrate the feature distributions.
3. Create a boxplot for each feature in the dataset.
4. Compare distributions and identify outliers.

          2 import matplotlib.pyplot as plt
          3 import seaborn as sns
```

```
In [16]: 1 df1 = sns.load_dataset('iris')
